Simply Tracked

Presented by Team ROTOM

Introduction

Today team ROTOM! presents to you Simply Tracked, a website that's been designed to communicate your problems in the most convenient way.

Now, Let us get started with the actual product!

01

The first navigating tool

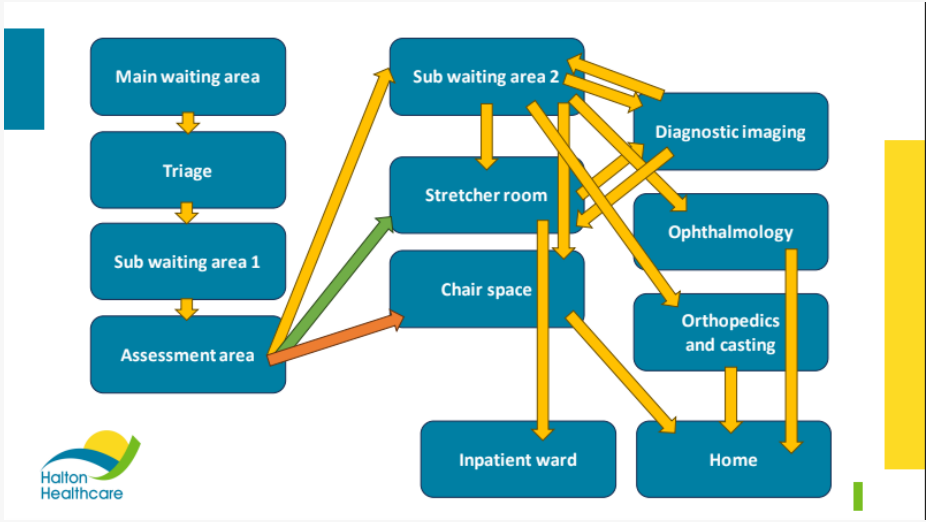
The First Navigating Tool

In our presentation we have multiple great features. The first thing I would like to cover upon is our understanding for the lack of language communication in the current health-tech field.

Application:

Urgency Level

Previously in the Mohacks introduction presentation, the hosts were talking about the unorganized hospital transportation system. EVERYONE WAS EVERYWHERE.

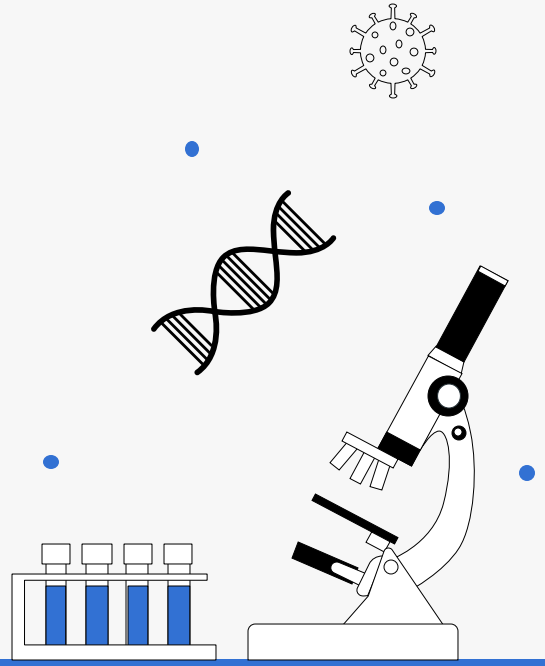


OUR SIMPLE SOLUTION

THE URGENCY SYSTEM & **The Pain Diagram**

02

UI



What would your experience look like?

This application is a user friendly software that supports individuals that are not sufficient in the native languages of Canada

Admin Control

The Front Desk and Care takers will observe the patients current locations and can see if they need to be moved. Most importantly their urgency level.

There is always room to improve!

Application:

03

The Targeted Audience

Our Target Audience

Accessibilities

Vision Sensory	Later into our teams web dev journey we hope to help an individual feel more personally treated. This means help add features for the visually impaired, hearing loss victims etc.
Security	When leaving the hospital vicinity, you lose access to the website, to let the website servers cool down .
Expanding to Virtual Reality	To go further with technology and the medical field. There can be futuristic approach to simulating the 3d atmosphere.
Aesthetics	In the future, partnerships with companies with similar interests will improve our designs since more sharing knowledge across companies and bigger teams.
Textbox	On our waitlist application we want to add a feature to see how many people are in line.

Thanks!
